Formulas for Calculating Height Dimensions to Top of Frame – Front Axle

Sample Data:

Model	Tire	Tire Loaded Radius	LH	C	D
T7F042	275/80R22.5G (XSH) R4L/S3L (Michelin) S4L	18.6"	9.69"	7.35"	5.75"

Frame Reinforcement RPO	Wheelbase	Suspension RPO	Axle RPO
F20	152" (EG9)	F28 (12,000 lb)	FS7 (12,000 lb)

Formulas:

CH = C + Tire Static Loaded Radius + LH CH = 7.35" + 18.6" + 9.69" = 35.64"
DH = D + Tire Static Loaded Radius + LH DH = 5.75" + 18.6" + 9.69" = 34.04"

Definitions:

C – Centerline of axle to bottom inside of rail at curb position
D – Centerline of axle to bottom inside of rail at design load
LH – Distance from the bottom inside rail to the top of the rail

NOTE: See the tire data charts for the following values: Tire Model and Tire Static Loaded Radius.
For the C & D values see the Front Axle and Suspension Chart.
For the LH values see the Frame Length with Reinforcements section.

Step Height Dimensions:

When calculating step height dimensions see the step assembly location, and the frame drawings for values.

Formulas for Calculating Height Dimensions to Top of Frame – Rear Axle

Sample Data:

Model	Tire	Tire Loaded Radius	LH	C	D
T7F042	275/80R22.5G (YSH) S3H (Michelin) S4L	19.0"	9.69"	11.41"	7.94"

Frame Reinforcement RPO	Wheelbase	Suspension RPO	Axle RPO
F20	152" (EG9)	GNB (21,000 lb)	HPN (21,000 lb)

Formulas:

CH = C + Tire Static Loaded Radius + C + LH CH = 19.0" + 11.41" + 9.69" = 40.11"
DH = D + Tire Static Loaded Radius + D + LH DH = 19.0" + 7.94" + 9.69" = 36.63"

Definitions:

C – Centerline of axle to bottom inside of rail at curb position
D – Centerline of axle to bottom inside of rail at design load
LH – Distance from the bottom inside rail to the top of the rail

NOTE: See the tire data charts for the following values: Tire Model and Tire Static Loaded Radius.
For the C & D values see the Rear Axle and Suspension Chart.
For the LH values see the Frame Length with Reinforcements section.

Step Height Dimensions:

When calculating step height dimensions see the step assembly location, and the frame drawings for values.

General Information

Section Modulus

- Section modulus is a measure of the frame strength based solely on the height, width, thickness, and configuration of the side rails. It is calculated at the point of maximum stress, which is usually directly behind the cab.
- Section modulus is not a measure of material strength and can only be used by itself to compare frames of like materials.
- Frame reinforcements will increase the section modulus because they increase the strength by adding to the thickness of the section.
- Consult the Frame Properties for all section modulus ratings.

Yield Strength

- Yield strength is a measurement of the frame material's strength. It is maximum load (PSI) that can be placed on the material and still have it return to its original position when the load is removed without being bent out of shape.
- It can be used only to compare frames of identical section. Two yield strength frames are available for the T-Series. They are 80,000 psi (551,600 kPa) and 110,000 psi (758,450 kPa).

RBM-Resisting Bending Moment

- Since Section Modulus can only be used to compare frames of like materials and yield strength can only indicate relative strengths of identical frames, some measurement is necessary to compare frames of different materials and different sections. The RBM, or Resisting Bending Moment, can be used for this comparison as it utilizes section modulus and yield strength in its makeup.
- **RBM = Section Modulus x Yield Strength**
- This measurement will show that a smaller section frame of higher strength steel will be just as strong as a larger section frame of lower strength of steel.
- It is readily apparent that both section modulus and yield strength are equally important so that their product, RBM, is the correct figure to use for frame comparisons. The RBMs for all standard and optional frames are shown on the Frame Properties charts.
- Frames are designed to torsional stiffness and beaming criteria as well as fatigue strength.

General Information (continued)

Frame Rail – Material and Weldability

- The frames on GM Trucks are built for strength, durability, and adaptability. They are available in tensile strengths of 80,000 psi (551,600 kPa) and 110,000 psi (758,450 kPa) ratings.
- The 80,000 psi (551,600 kPa) frames are made from hot rolled steel that is pierced and formed to produce a finished side rail. Following the procedure outlined in the GM Truck Service Manual these frames can be subjected to welding without affecting frame integrity.
- The 110,000 psi (758,450 kPa) frame rails are made from steel with an initial yield strength of 35,000-40,000 psi. The chemistry of the steel is slightly different to allow for better handling characteristic.Because the heat treating operation causes molecular movement in the steel, the only holes pierced in the side rails prior to heat treating are near the front-end hole. Growth can be predicted in this area and adjustments in hole placement can be made accordingly. The balance of the required holes are pierced in the frame rail after heat treating.
- The 110,000 psi (758,450 kPa) frame rails are heat treated by an electric induction heat treating process. During this process, the formed side rails are moved through a series of three induction coils and brought to a temperature of about 1650º F, (898.9º C). Once at this temperature, the side rail passes through a cold-water quench. After the frame goes through the cold-water quench, it is very hard but also brittle. Thus, the rails continue to roll through the final “tempering” electric coil and are brought to a temperature of about 900º F, (482.2º C). Then the frame is allowed to cool to room temperature. This tempering operation “draws” some of the hardness out of the material, but it now becomes very tough and durable. Once through the tempering operation, the side rail passes through a “shot peen” operation. This process hurls millions of 1/8-inch, (0.3175 cm), diameter spherical-shaped balls at the side rails. Shot peening significantly increases the fatigue life of the frame rail, as well as providing a clean surface.
- Welding should not be preformed on the heat treated 110,000 psi (758,450 kPa) frame rails. Welding depends on heat for a good adherence. Applying heat or welding on hardened side rails will create a “soft zone” where the heat was applied. Since the heated area is now softer than the balance of the side rail, the general area would become more susceptible to failure of the frame rail.

General Information (continued)

Body Mounting Concerns

- The great variety of truck bodies and applications is difficult to appreciate. GM has tried to offer frame equipment suitable for the greatest number of configurations, but some concerns do exist. To assist sales personnel and customers, we remind everyone to review and follow data presented in:
  - TRUCK BODY BUILDER BOOK Located at gmupfitter.com
  - SERVICE MANUAL
  - OWNERS MANUAL
- Each publication contributes to an understanding of the complex issues of good vehicle / body application.
- The amount of load carried by the front axle is the most significant consideration. Front Gross Axle Weight Ratings (FGAWR) are sometimes controlled by the frame.
- The front frame limit is defined by wheelbase and frame choice for each model. The attachment method and the structural character of the body will also affect the final vehicle performance.
- Based on experience, GM has determined that **the first body mounting point should be within 12 inches or (30.5 cm) of the Back-of-Cab.** This will assure that ride, handling and load carrying ability are maintained for high customer satisfaction.

Single Axle Medium Duty Conventional

- T6500 single-axle model frames feature straight full-channel side rails over the total length of the frame. Channel type crossmembers are web mounted to leave side rail flanges clear for body mounting.
- T7500 single-axle model frames are similar to the T6500 frames.
- Optional heat-treated sidemembers (F06) are also available on T7500 truck (RQ2) models.
- “L” shaped reinforcements are available to increase the section modulus.
- Heat-treated sidemembers (F06) and “L” shaped reinforcements are standard for tractor (RQ3).
- Rear side rail taper is standard for tractor.

General Information (continued)

Strength

- The frame has a straight, full-depth, C-shaped side member rail design and a ladder-type frame assembly.
- The overall frame length on sizes similar to those previously offered has increased by about 1 inch or (2.54 cm) to accommodate a slight increase in front overhang (related to improved aerodynamics and visibility).
- Basic frame dimensions.
- The T6500-T7500 Series models (unlike the 4500-5500 Series) allow customers to select the frame strength they want and tailor it to their particular requirements.
- The (RPO F05) 8mm thick frame with 80,000 psi (551,600 kPa), strength is available on all single-axle trucks. Because of its widespread availability and strength, it has, by far, been the most popular choice, accounting for nearly 80 percent of total frame selection.
- The (RPO F06) 8mm thick frame with 110,000 psi (758,450 kPa) strength is available on all wheelbase models. It is now also the standard frame for the tandem axle models and tractor models. This provides more value (extra strength) for customers and simplifies manufacturing for GM.
- The frame crossmembers all have a 50,000 psi (344,750 kPa) material strength. Their thickness varies, depending on their application.
- Customers can also choose frame reinforcements for extra strength to meet their GVW/gross axle weight rating (GAWR) needs.
- The reinforcements can make a considerable difference in front axle loading capability. For example, if a customer selects a 224-inch (569 cm) wheelbase and (RPO F05) frame, the maximum load rating allowed on the front is 12,000 pounds (5443 kg). Adding the L-shaped frame reinforcement option increases front axle load rating 14,600 pounds (6622 kg).
- Basically, the “L” shaped reinforcement gives the 8mm-thick/80,000-psi frame a front axle load rating equal to a 8mm thick/ 110,000 psi (758,450 kPa) strength frame.
- The T6500-T7500 Series offer two frame reinforcements. Both have the “L” shaped (with the flange at the bottom) to fit this Series' particular design requirements. Both are also 8mm thick.
- (RPO F08) and (RPO FSA) with 80,000 psi (551,600 kPa) strength “L” shaped reinforcement on the T6500-T7500 single-axle truck models.
- (RPO F20) and (RPO FSC) which are made of heated treated material to match the heat-treated frame option.
- RPO F08 and F20 start under the cab and run to approximately the rear of the rear spring hanger.
- RPO FSA and FSC start under the cab and run to the end of the rail.

Frame Material Properties

Frame Material and Physical Properties	T6500 & T7500 Single-Axle Truck Models	T7500 Models
	Frame RPO "F05"	Frame RPO "F06"
Material Steel No. or Type	SAE J1392 (-080 XLF)	H.T. SAE 1027
Material Thickness – in. (mm)	0.32 (8)	0.32 (8)
Physical Properties: Min. Tensile or Ultimate Strength psi (kPa)	95,000 (655,000)	125,000 (861,800)
Minimum Yield Strength psi (kPa)	80,000 (551,600)	110,000 (758,400)
Resisting Bending Moment (RBM) (Rated Yield Strength x Section Modulus)	80,000 x SM	110,000 x SM
Section Modulus in^3 (cm^3)	12.69 (208)	12.69 (208)
Rated RBM	1,015,000	1,396,000

Combined Section in^3 (cm^3)	24.23 (397)	24.23 (397)
Rated Combined RBM	1,938,000	2,665,000

* Grade 80 is rated equivalent to Heat Treated SAE 1027

**SECTION MODULUS BASED ON Square C-Channel. (Actual parts contain radius)

110K Heat Treated Versus 80K HSLA

GM Truck is the only major OEM to offer 80K HLSA material on all T-Series.

This offering is based on fatigue testing which shows equivalency to heat treated steel.

Frames fail in fatigue, not yield, and therefore the materials are equivalent with respect to service life.

Rear Axle and Suspension – Formulas (042)

DEFINITIONS:

A - CENTERLINE OF AXLE TO BOTTOM OF AXLE BOWL

B - CENTERLINE OF REAR AXLE TO BOTTOM INSIDE RAIL AT METAL TO METAL POSITION

C - CENTERLINE OF AXLE TO BOTTOM INSIDE RAIL AT CENTERLINE OF EQUALIZER BEAM AT CURB POSITION

D - CENTERLINE OF AXLE TO BOTTOM INSIDE RAIL AT CENTERLINE OF EQUALIZER BEAM AT DESIGN POSITION

CH - REAR FRAME HEIGHT
DISTANCE BETWEEN THE TOP OUTSIDE RAIL AND THE GROUND-LINE THROUGH THE VERTICAL CENTERLINE OF THE REAR AXLE AT CURB POSITION

DH - REAR FRAME HEIGHT
DISTANCE BETWEEN THE TOP OUTSIDE RAIL AND THE GROUND-LINE THROUGH THE VERTICAL CENTERLINE OF THE REAR AXLE AT DESIGN POSITION

HH - REAR AXLE CLEARANCE
MINIMUM CLEARANCE BETWEEN THE REAR AXLE AND THE GROUND-LINE

JH - REAR TIRE CLEARANCE
MINIMUM CLEARANCE REQUIRED FOR TIRES AND CHAINS MEASURED FROM THE TOP OF THE FRAME AT THE VERTICAL CENTERLINE OF THE REAR AXLE

KH - CHAIN CLEARANCE

LH - DISTANCE FROM THE BOTTOM INSIDE RAIL TO THE TOP OF THE RAIL

CW - TRACK DUAL WHEEL VEHICLES
DISTANCE BETWEEN THE CENTERLINES OF THE DUAL WHEELS AS MEASURED AT THE GROUND-LINE

DW - MINIMUM DISTANCE BETWEEN THE INNER SURFACES OF THE REAR TIRES

EW - MAXIMUM REAR WIDTH
OVER-ALL WIDTH OF VEHICLE MEASURED AT THE OUTER MOST SURFACE OF THE REAR TIRES

HW - DUAL TIRE SPACING
DISTANCE BETWEEN THE CENTERLINES OF THE TIRES IN A SET OF DUAL TIRES

KW - REAR BODY WIDTH
MAXIMUM BODY WIDTH BETWEEN REAR TIRES

SEE TIRE CHART FOR VALUES: TIRE SELECTION, TIRE RADIUS TIRE LOADED RADIUS AND TIRE CLEARANCE

FORMULAS FOR CALCULATING REAR WIDTH AND HEIGHT DIMENSIONS:

CH = TIRE LOADED RADIUS + C + LH
DH = TIRE LOADED RADIUS + D + LH
HH = TIRE LOADED RADIUS - A
JH = KH - B - LH
KH = TIRES RADIUS + 3.00 INCHES
CW = TRACK
DW = TRACK - 1 TIRE SECTION - HW
EW = TRACK + 1 TIRE SECTION + HW
KW = DW - 5.00 INCHES
LW = 1.00 INCHES MINIMUM CLEARANCE BETWEEN TIRES AND SPRINGS

NOTE: TRACK AND OVERALL WIDTH MAY VARY WITH OPTIONAL EQUIPMENT

KW - REAR BODY WIDTH
MAXIMUM BODY WIDTH BETWEEN REAR TIRES

SEE TIRE CHART FOR VALUES: TIRE SELECTION, TIRE RADIUS TIRE LOADED RADIUS AND TIRE CLEARANCE

FORMULAS FOR CALCULATING REAR WIDTH AND HEIGHT DIMENSIONS:

CH = TIRE LOADED RADIUS + C + LH
DH = TIRE LOADED RADIUS + D + LH
FH = KH - E - LH
HH = TIRE LOADED RADIUS - A
JH = KH - B - LH
KH = TIRES RADIUS + 3.00 INCHES
CW = TRACK
DW = TRACK - 1 TIRE SECTION - HW
EW = TRACK + 1 TIRE SECTION + HW
KW = DW - 5.00 INCHES
LW = 1.00 INCHES MINIMUM CLEARANCE BETWEEN TIRES AND SPRINGS

NOTE: TRACK AND OVERALL WIDTH MAY VARY WITH OPTIONAL EQUIPMENT

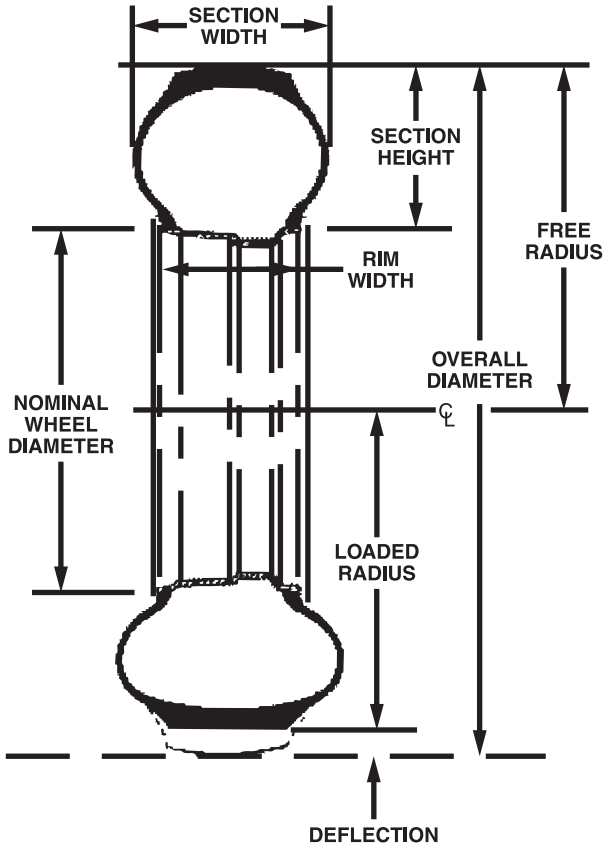
WHEELS & TIRES

Tire Sizes and Dimensions

SW	=	Section width
SH	=	Section height
O	=	Dish offset
D	=	Diameter of tire and wheel
RW	=	Rim width
BW	=	Bulge width (loaded tire)
BCD	=	Bolt circle diameter
BD	=	Bore diameter
SLR	=	Static loaded radius
OAD	=	Overall diameter



Examples:

Tubeless 11R22.5/F

11	=	11" overall width between tire sidewalls
R	=	Radial construction
22.5	=	22.5" rim diameter
F	=	12-ply rating-load range

Low Profile 255/80R22.5G

255	=	255 mm overall width between tire sidewalls
80	=	Aspect ratio in % of section height/section width
R	=	Radial construction
22.5	=	22.5" rim diameter
G	=	14-ply rating-load rating

NOTE: Overall diameter and SLR may vary between manufacturers of the same size and tread code. Different tire sizes will affect road speed.

Hub Mount Wheel Offerings

HUB MOUNT WHEEL IDENTIFICATION

The 10-hole, 11.25" (28.6 cm) stud mount wheel and the 10-hole, 11.25" (28.6 cm) B.C. have the same bolt circle pattern but are not interchangeable. These wheels are distinguishable because of the chamfer on the stud mount wheels versus the straight through bolt holes on the hub mount wheel. In addition, generally stud mount wheels have two handholes located 180 degrees apart. By offering a five handhole version of the hub mount wheel, the differentiation between the two wheel mountings is much easier.

Also, five handhole wheels offer a weight savings versus two handhole wheels of the same general size. Many large fleets are specifying and O.E.M.s are standardizing on five handhole design for the above reasons. The industry is moving to hub mount wheel, and General Motors is pleased to offer this latest wheel technology on their vehicles. Please contact GMC Truck Sales Engineering for additional information.

AKW: Is an Accuride/Kaiser Partnership aluminum wheel.
RPO RPW: Is a steel disc inner wheel same as Q83, painted gray.
RPO YU8: Aluminum front wheel polished one side (except RPM which is polished both sides and priced accordingly).
RPO PNB: Both inner and outer rear wheels are aluminum and polished on both sides.

[1] Max. speed may be increased to 75 mph (121 kmh) by adding 5 psi (.34 bar) to data book recommended pressure. As a result of adding 5 psi (.34 bar) to obtain 75 mph (121 kmh) rating, the tire capacity will decrease by 12%. Do not exceed maximum pressure capacity of wheel. Consult wheel manufacturer. Exceeding the lawful speed limit is neither recommended nor endorsed.

[1] Max. speed may be increased to 75 mph (121 kmh) by adding 5 psi (.34 bar) to data book recommended pressure. As a result of adding 5 psi (.34 bar) to obtain 75 mph (121 kmh) rating, the tire capacity will decrease by 12%. Do not exceed maximum pressure capacity of wheel. Consult wheel manufacturer. Exceeding the lawful speed limit is neither recommended nor endorsed.
